Addendum to IICL TB 001 - (Revision 3), 2 January 2019

**Title: *Performance Standard for New and Unused Structural Container Floor Panels to Be Installed in International Freight Containers***

### **Purpose**

IICL is introducing an additional requirement to the IICL TB 001 standard that is considered essential for ensuring floorboard quality and helping to prevent the use of counterfeit products.

All floorboard manufacturers are required to permanently mark the upper face of each floorboard with the manufacturer's name and/or logo. The marking shall appear in at least four (4) locations on each floorboard. Each marking shall measure at least 15 cm × 15 cm (6 in × 6 in).

The markings shall be applied during the manufacturing process using an engraved stainless-steel plate installed on the upper face of the hot press. The markings must be clearly visible and durable throughout the service life of the floorboard.

Floorboard manufacturers are requested to implement the stamping procedure during the next 90 days but no later than October 31st, 2026.

Should you have any questions about this addendum, please contact us via email at [technical@iicl.org](mailto:technical@iicl.org)
