## **CSC – Convention for Safe Containers**

### **How do I become a “Certified CSC Inspector” capable of renewing the CSC plate expiration date?**

Currently there is no “certification” required for inspectors to extend the expiration date on a CSC plate. The ISO / CSC guide, 2014 edition, states under clause 12.4.1.3 that the examination of a container should be carried out by a person having such knowledge and experience of containers as will enable him to determine whether it has any defect that could place any person in danger. The ISO/CSC guide provides a detailed list of serious structural deficiencies to critical sensitive components.

The IICL certification is not required to perform a CSC inspection, but it is highly recommended as it demonstrates inspectors’ knowledge. IICL offers an online training course including the option to purchase the latest edition of the ISO/CSC guide on our website at <https://www.iicl.org/learning-center/csc-training/>

Note: Containers subject to major repairs and/or modifications follow different requirements.

### **Is the IICL certificate required for the inspectors to renew an expired or expiring CSC plate?**

IICL certification is not required but it is highly recommended as it demonstrates inspectors’ knowledge. IICL offers an online training course with the option to purchase the latest edition of the ISO/CSC guide on our website at <https://www.iicl.org/learning-center/csc-training/>

Note: Containers subject to major repairs and/or modifications follow different requirements.

### **How often a container must be inspected based on the convention requirements?**

- The interval from the date of manufacture to the date of the first examination shall not exceed five years.
- Subsequent examinations of new containers and re-examination of existing container shall be at intervals of not more than 30 months (periodic examination).

### **What are the main goals of the CSC?**

- Safe structural requirements and testing at the time of manufacturing.
- Periodic inspections and maintenance.
- Consistent and uniform assessment of safe containers by the different countries as containers move across borders.
- Protect human life.

## **Exam registrations**
