IICL – HOW TO MEASURE - HTM - Educational movies

The IICL developed a series a short movies showing how to measure damages on major components of dry van containers using 3-dimensional technology. The IICL will continue to add movies to the current list as they are developed. It is expected to have approx. 65 movies showing the different measurement techniques by the middle of 2023.

The goal is to provide an easy, readily available access to individuals that want to expand their knowledge about container inspections and measurement techniques.

Click on the [image below](#) to watch the movies already available.

The HTM project was developed under the supervision of the IICL Technical Committee. Special thanks to the work group participants:

Chai Wah Koh	SEACO
Jorge Dias	SEACUBE
Paul Raitano	TRITON
Peter Brandon	TEXTAINER

For technical questions and comments please send na email to technical@iicl.org.

End.
